

# Potentiality (start to finish) of a Human being is:

**zygote**

**fetus**

**baby**

**child**

**teen**

**adult**

**senior**

- A **zygote** is potentially a **fetus**, a fetus is potentially a **baby**, a baby is potentially a **child**, a child is potentially a **teen**, a teen potentially an **adult**, etc.
- There is no difference between each of these stages of *potentiality*. Each one must occur for the next to happen. The DNA in the **zygote** is the same as in the **senior**!
- All these stages are part of the **entire life-cycle**. Remove any one of these stages and you have prevented a human-being from developing. One stage of the time-line is no less vital than the other.
- **QUESTION:** It is a crime to kill someone after they are born, but not before the day of their birth. Why is this?
